19 June 1959

MEMORANDUM FOR : Acting Chief, Development Projects Division

SUBJECT : Granger Countermeasures Repeater, Model 504

1. On 24 June 1959, a meeting was held at Point Mugu Naval Air Station to discuss the proposed flight test program of the production Granger Countermeasures Repeater. Present at the meeting were:

25X1

25X1

2. The first production Granger [redacted] is now complete. It is presently undergoing laboratory testing at rate A/B and will be ready to deliver to Edwards Air Force Base for flight testing approximately 20 July 1959. This production article will have the additional feature of remote doppler deception as well as retaining the characteristics of the original system.

3. The proposed flight test program is as follows:

- a. Test that the box functions properly at maximum altitude of carrier aircraft.
- b. Test operation of system to perform equally as well as during the R & W phases. This test to be accomplished at Point Mugu, using same type radar system as before.
- c. Repeat b with c.w. doppler system activated to test priority circuit of Granger box.
- d. Repeat "tail chase" using doppler only.
- e. Test of box simulating tactical mission to include zoom climbs of tactical aircraft using X-band tracking radars.

25 YEAR RE-REVIEW

- 3 -

(NOTE: It may be possible to combine a and b, and c and d, above. Item b cannot be combined with either c or d, since the doppler system can only be deactivated on the ground.)

4. There is one large obstacle to the test program at this time. All Y-106's with suitable IRS control systems have been transferred from Edwards Air Force Base due to completion of the test program. It will be necessary to attempt to borrow an Y-106 from the Patridge production line through Col. [redacted] AFMPP) to lay on the request to AMG. No particular problem is foreseen in accomplishing the necessary coordination. Major [redacted] will make the request of Col. [redacted]

25X1

5. RECOMMENDATIONS: It is recommended that DPO Operations Branch, in coordination with Communications Section, arrange for the necessary field technical representatives to be at Edwards Air Force Base on 29 July 1959 for on-the-job training of installation, ground testing, and maintenance of the Granger system. It is doubtful that Granger is capable of sending technicians to the field due to lack of personnel. It should not be necessary for them to do so since the system, although complex, is relatively straightforward for an electronic specialist. This training can be better accomplished at Edwards than in the field, where both the high level of experience and the contractor will be available to assist in the program.
